Subject: Bay-Delta Water Quality

Dear Chairwoman Felicia Marcus and Members of the California Water Board,

I am very concerned that water diversion from rivers that flow into the Bay-Delta will seriously jeopardize salmon viability. The population of salmon migrating, spawning, and returning to the ocean has been drastically reduced and is now at the brink.

Would this Board really take steps to put an end to the historic salmon runs? And for what end?

I hope not!!!

I have hope that your conscience and humanity will recognize the importance of the next step. Diversion must be severely limited. I have read that 60% of unimpaired flow is required to maintain and help recover the salmon migration. I hope you are up to the task.

Cordially,

Ernest Goitein
